Variable Reluctance Speed Sensor for Use in Explosive Atmospheres Ex ia and Ex d EX58H35 GREEN L

GREEN LINE

Product ID				
	Type # EX58H35	Product # 385Z-05636	Drawing # 114.647 Rev.0	
General				
Function	The EX58H35 series variable reluctance (VR) speed sensors consist of an iror core, an inductive coil, and a permanent magnet. A ferrous pole wheel passing the sensor face changes the magnetic field strength, resulting in an AC voltage being induced in the coil. The frequency of the output signal is proportional to speed of the moving target. The amplitude of the signal depends on speed, air gap, geometry of target, magnetic properties of target material, and the electric load. VR sensors, also known as passive or electromagnetic sensors, do not require an external supply.			
Usage in an explosion risk environment	Certification pending. Details will follow after finished certification.			
Marking	II 1 G EEx ia IIC T6-T1 (pending)			
Technical data		11 37		
Coil properties	 Inductance @ 1 kHz: 70 mH ± 10% Resistance of entire sensor: 2950 Ohm ± 10% (coil without energy protectin devices: 250 Ohm) Magnet polarity: south pole towards front face Pole piece: diameter 2.7 mm 			
Polarity	Upon approach of ferrous metal, the signal pin is positive with respect to GND			
Signal output	The signal amplitud affected by air gap, linear speed of the to 150.00 45.00 40.00 50.00 10.00 10.00 50.00 10.00 11	Aaximal output voltage (reference speed 6	d for a load of 100 kOhm ial. It is also proportional one of the state of the stat	
Frequency range	Up to 20 kHz, lower limit depending on application			
Housing	5/8"-18 UNF-2A, tightening torque: max. 35 Nm			
Connection	Cable for ex applications, properties tbd			
Protection	tbd			
	Housing and electronics galvanically isolated (Test: 500 V, 50 Hz for 1 minute)			
Insulation	Housing and electro	onics galvanically isolated (Test: 500 V, 50 Hz for 1 r	minute)

IN CHARGE OF SPEED

OPERATING INSTRUCTIONS EX58H35 REV. 0

	 Involute gear Tooth width > 10 mm Side offset < 0.2 mm Eccentricity < 0.2 mm 		
Air gap between sensor and pole wheel	Depending on lowest circumferential speed which has to be detected, on trigglevel and ex safety parameters. See figure and ex information.		
Electromagnetic compatibility (EMC)	Please contact Jaquet for further details.		
Vibration & shock immunity	Jaquet Greenline sensors are approved for rough environments. Please conta Jaquet for further details.		
Operating temperature	-40℃125℃		
Further Information			
Safety	All mechanical installations must be carried out by an expert. General safety requirements have to be met.		
Installation	The sensor has to be aligned to the pole wheel according to the sensor drawing independent of its rotational orientation. Deviations in positioning may affect the performance and decrease the noise immunity of the sensor. During installation the smallest possible pole wheel to sensor gap should be set. The gap should however be set to prevent the face of the sensor ever touching the pole wheel. A sensor should be mounted with the middle of the face side over the middle of the pole wheel. Dependent upon the wheel width, a certain degree of axial movement is permissible. However, the middle of the sensor must be at minimum in a distance of 3 mm from the edge of the pole wheel under all operating conditions. A solid and vibration free mounting of the sensor is important. Eventual sensor vibration relative to the pole wheel can induce additional output pulses. The sensors are insensitive to oil, grease etc. and can be installed in arduous conditions.		
Maintenance	Product cannot be repaired.		
Transport	Product must be handled with care to prevent damage of the front face.		
Storage	Product must be stored in dry conditions. The storage temperature correspond to the operation temperature.		
Disposal	Product must be disposed of properly, it must not be disposed as domestic waste.
