## Alarms

Limits can be set for up to 16 indicated parameters and can be set with a specified time interval. If any input of the indicated parameters is over or under its setting limit and persists over the specified time interval, the event will be recorded with time stamps and trigger the Alarm DO output. The 16 indicated parameters can be selected from any of the 80 parameters available.

## I/O Option Module

The E-module® technique was adopted for its flexibility and easy expansion of the I/O function of Acuvim II. A maximum of 3 modules can be used for one meter. Digital input, digital output, pulse output, relay output, analog input and analog output are provided by I/O option module.

## Anti-tampering Seal

Users can physically seal the meter similar to a utility meter in order to provide anti-tampering protection. All metrological programming and user-defined parameters are protected with a physical seal.

## High Frequency Metering

Designed for use with 400Hz aircraft systems Acuvim II series power meters effectively monitors any airborne system.

## MULTI-PLATFORM ACCESS

Built-in web server provides computer, tablet and smartphone access.

## Data Logging

Acuvim IIR/IIE/IIW offers 3 assignable historical logs where the majority of the metering parameters can be recorded. The onboard memory is up to 8 MB and each log size is adjustable. A real time clock allows for any logged events to be accurately time stamped.

With AXM-WEB2 module added, the memory size expands to industry-leading 8GB memory with 1-second interval datalogging.

## Time of Use

Users can assign up to 4 different tariffs (sharp, peak, valley and normal) to different time periods within a day according to the billing requirements. The Acuvim IIE meter will calculate and accumulate energy to different tariffs according to the meter's internal clock timing and TOU settings.

## Waveform Capture

Acuvim IIW can record 100 groups of voltage and current waveforms. It provides the waveform record of 10 cycles before and after the triggering point. It also supports a settable triggering condition.

COMtrade waveform file format is available from waveform capture.

## Power Quality Event Logging

When a power quality event happens, such as voltage sag and swell, etc., Acuvim IIW will record the timestamp and the triggering condition of the event. It can save up to 50, 000 power quality events.

## Acuvim II Series AXM-DIN Rail Mounting Adapter

AXM-DIN Rails adapter provide easy installation of panel-mount Acuvim II series meter on DIN rail in all models and IO options.

### DIMENSIONS

## IP66/NEMA4X Protection Cover

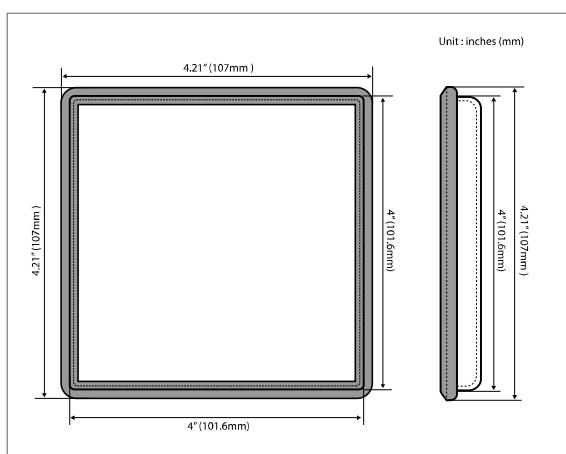

The IP66/NEMA4X Protection Cover is designed for **Acuvim II**, Acuvim-L and all 96mm by 96mm display panel meters; it increases the IP environmental rating of a meter's display to IP66 or NEMA 4X regardless of the original rating of display.

The IP66/NEMA4X Protection Cover prevents damage from dust, water, and other elements when paired with Acuvim II and L series meters they become an effective solution for high protection-required applications, such as outdoor panels.

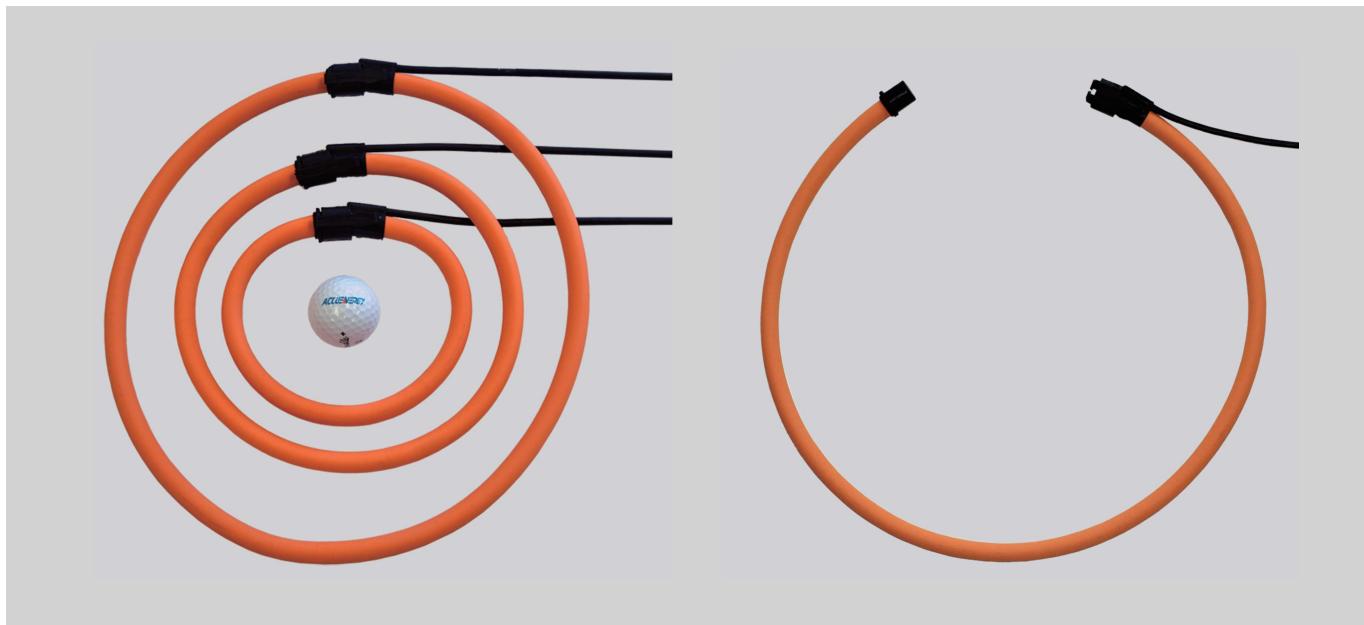

**Note:** To use the display keys, easily remove the IP66/NEMA4X Protection Cover as the seal is made of durable - tight grip rubber. Simply push back in place when you're done.
